                                                                                                                                                                                                   This CDS has been cloned incl. stopcodon.

This CDS has been cloned incl. stopcodon.

The CDS has been cloned into pDONR201 via a BP Clonase (TM) reaction. Additional sequence has been added in front of the scodon: att. .AAAAA GCA GGC TCC ACC (ATG).

The stopcodon is followed by the 3' att site:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1163, Application US/09538092

Patent No. 6753314

GENERALI INORMATION:

APPLICANT: Giot. Loic

APPLICANT: Giot. Loic

TITLE OF INVENTION: Protein-Protein Complexes and Method of Using Same

FILE REFERENCE: 15966-542

CURRENT APPLICATION NUMBER: US/09/538,092

CURRENT FILING DATE: 2000-03-29

PRIOR APPLICATION NUMBER: 60/127,352

PRIOR PILING DATE: 1999-04-01

PRIOR PILING DATE: 2000-02-01

NUMBER OF SEQ ID NOS: 1387

SEQ ID NOS: 1387

SEQ ID NO 1163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            71 VIGNGSFGVVYQAKLCDSGELVAIKKVLQDKRFKNRELQIMRKLDHCNIVRLRYFFYSSG 130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121 EKKDEVYLNLVLDYVPETVYRVARHYSRAKQTLPVIYVKLYMYQLFRSLAYIHSFGICHR 180

                                                                                                                                                                                                                                                                             Sequence 14, Application US/08602264A
Patent No. 5837853
GENERAL INFORMATION:
ARABINOS.
APPLICANT: AKIAIKO TAKASHIMA et al.
TITLE OF INVENTION: PREVENTIVE OR THERAPEUTIC AGENTS FOR
TITLE OF INVENTION: ARZHEIMER'S DISEASE, A SCREENING METHOD OF ARZHEIMER'S DISEASE
TITLE OF INVENTION: CAL-PROTEIN KINASE I ORIGINATED FROM HUMAN BEING (AS AMENDED)
NUMBER OF SEQUENCES: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     71 VIGNGSFGVVYQAKLCDSGELVAIKKVLQDKRFKNRELQIMRKLDHCNIVRLRYFFYSSG 130
